We've all been hit by inopportune screen rotations at some point or another. Having the display orientation suddenly go from portrait to landscape when reading an interesting article in bed is one of the biggest irritations that come with using a smartphone (at least, for me). Thankfully, there are apps out there for your Android to help alleviate this inconvenience. Rotation Manager by Meerkat is one such app, and it's pretty effective at clamping down on unwanted screen rotations. This app also gives you numerous options as far as orientations go, which can get very confusing if you don't know the ropes. But we love to make things as straightforward as possible, and the setup provided below will get you there, so let's get started. Don't Miss: Keep Your Android's Screen from Turning Off While You Use It To install Rotation Manager, simply head to the Google Play Store and download the app for free. Install Rotation Manager for free from the Google Play Store An initial set-up and tutorial page will greet you when you open Rotation Manager for the first time. Swipe to the next page and tap on the circular icon next to "Auto-Rotate On" until the text changes to "Forced Portrait." This will set portrait mode by default and let you customize rotation for other apps later on. Once you're on the final page, you'll have the option to disable the "Permanent Notification," which is enabled by default. Leaving this on will have the app show up as a notification whenever you swipe down from the top of your screen, but it will also help ensure that the app doesn't get closed by Android's memory management system while running in the background. So it's a judgement call, but we haven't experienced any issues with it turned off, so that's what we'd recommend. After you've set that up, turn on Rotation Manager using the circular power icon in the app. You'll be redirected to a system settings page for Usage data access, so scroll down and search for "Rotation Manager." Once you've found it, tap on it and turn on Allow usage tracking. When you're done, head back to the app and hit the check symbol at the bottom of the page to finalize initial setup. Now it's time to set up and control the orientation of individual apps. On the main screen of Rotation Manager, select an orientation by tapping on either the vertical or horizontal icons next to a specific app to lock it into either landscape or portrait mode. Highlighting both icons will allow that particular app to auto-rotate. At this point, you're all set up and ready to go. From now on, you won't have to worry about an app auto-rotating when you didn't want it to, and instead, it'll be locked into the orientation you chose in Rotation Manager. As mentioned before, there are more options as far as global rotation settings go. You can always go back to learn about each settings by heading to the side navigation menu in Rotation Manager and choosing "Instructions." This will give you the opportunity to experiment with your smartphone's rotation beyond the settings we've depicted above. What do you think of Rotation Manager? Feel free to share your thoughts on this convenient app and drop us a line in the comment section down below. Don't Miss: How to Rotate Any Orientation-Locked App on Android Keep Your Connection Secure Without a Monthly Bill. Get a lifetime subscription to VPN Unlimited for all your devices with a one-time purchase from the new Gadget Hacks Shop, and watch Hulu or Netflix without regional restrictions, increase security when browsing on public networks, and more. Buy Now (80% off) > Other worthwhile deals to check out: Cover photo and screenshots by Amboy Manalo/Gadget Hacks I have one of my activities which I would like to prevent from rotating because I'm starting an AsyncTask, and screen rotation makes it restart. Is there a way to tell this activity "DO NOT ROTATE the screen even if the user is shaking his phone like mad"? 5 1 week ago Mar 03, 2016 - Jul 25, 2010 at 13:50. 1. You call super.onConfigurationChanges () for orientation changes too, which rotates the screen. Use an if structure to determine if the ... Show details Enabling and disabling auto-rotate or orientation lock on an Android device Film any way you want with BIGVU. In order to film horizontally, you must make sure Auto Rotate is on! The auto-rotate button automatically rotates your device's screen when you flip your device between landscape and portrait mode. Let's learn how to enable and disable auto-rotate or orientation lock on an Android device. Method 1 Method 2. 1. Go to settings 2. Select "Display" 3. Scroll down until you reach "System" and select to turn on Auto-Rotate When troubleshooting an Android screen that won't rotate when you turn the phone sideways, look for the most common root cause. Hardware failure is least likely, so trying a reboot or updating your phone first is the easiest fix. We've compiled proven fixes for this issue from the easiest to the most difficult. The tips below should work no matter who manufactured your Android, whether it's Samsung, Google, Huawei, or any other running the Android OS. Any of the below issues can prevent your screen to rotate properly when you turn your phone. Auto rotate option is turned off or not working. The screen you're using isn't set to auto-rotate. Recent apps are interfering with auto-rotate. You're touching the screen when you rotate. Your Android needs to be updated. G-sensor or accelerometer is faulty. This issue has been reported happening on any Android phone, so it's usually nothing to worry about. Walk through these steps and you should be able to resolve the issue. Turn on Auto rotate. You'll find this setting in the Quick Settings menu. If you see Auto rotate highlighted in blue, then auto rotate is turned on. If you don't see Auto rotate, but there's a Portrait icon instead, auto rotate is disabled. Tap Portrait to turn on auto rotate. If you've turned on the Talkback app in Accessibility Settings, you should know that enabling auto rotate can cause issues. Rotating the screen will interrupt any spoken feedback that's currently in process. Don't touch the screen. Remember, your Android screen is a touch screen. Holding your finger on the screen while rotating your phone will lock auto rotate from working. Doing any Android gestures will have this same effect. So, whenever you rotate the phone, hold it by the edges of the body only. If you're convinced you weren't touching the screen, calibrate the touch screen make sure the screen isn't sensing taps when you aren't touching it. Restart your Android phone. Restarting your phone purges system memory which often resolves many strange behaviors. Not only will it resolve minor issues like your Android screen not rotating, but it could also fix a slow phone or even fix a frozen screen. This should only be a reboot, not a reset. You shouldn't have to reset your Android phone to fix this issue with the screen not rotating. Allow Home screen rotation. If a specific screen, like your Home screen, Lock screen, or Voice call screen won't rotate while other apps do, this may not be an issue with the auto rotate feature at all. By default, auto rotate will not rotate these screens. You can enable this by going back to the auto rotate icon described in the first step and tap just below the icon to enter its settings. Turn on Home screen, Lock screen, or Voice call screen to enable that. Update your Android. New OS updates often include fixes for bugs and other issues. If there are any new viruses or malware that affect auto rotate, the newest updates could include patches. If you're experiencing other symptoms of an Android virus, you'll need to work on removing the virus from your phone. If you do discover that you had to clean your Android of a virus, you'll want to make sure you install a good antivirus app to prevent this from happening again in the future. Double check rotate settings in the app you're using. For example you can set videos to rotate in Google Photos. Those app settings could be conflicting with your phone attempting to auto rotate. Calibrate your Android's sensors. This involves moving your phone in a figure-eight motion. This causes the accelerometer and G-sensor to re-adjust their settings to default. This could potentially help the phone respond better to the motion of turning your hand when you want to rotate the screen. Uninstall recently installed apps. If you recently installed any apps before this behavior started, that app could be causing conflicts with your Android's auto rotate feature. Send the phone in for repair. The root cause could be faulty hardware and it might need professional repair. FAQ How do I turn off screen rotation on Android? To turn off screen rotation on Android, tap Settings > Display > Auto-rotate screen > turn off Auto-rotate screen. How do I split the screen on an Android? To split the screen on Android, open an app, then long-press the navigation icon on the bottom of the device, while swiping up. When the app's window appears, select Split Screen. How do I record the screen on an Android? To screen record on Android, download the Google Play Games app, then launch a game, tap the camera icon, choose Settings, and tap Next. Tap Record and wait for the countdown. You can exit the video game to record other content. Thanks for letting us know! Get the Latest Tech News Delivered Every Day Subscribe Tell us why! Have you come across an issue on your Android device where the screen won't rotate when you turn it sideways? Many users have reported that the screen orientation on their phone is locked, and they can't view any content in landscape mode, as the screen refuses to rotate. Luckily, there are some methods you can try to fix the Android screen rotation not working issue. Here are some of the most common reasons behind the Android screen rotation not working: Third-party app A service controlling auto-rotation on your phone Faulty G-sensor and accelerometer A bug in the firmware You are touching the screen as it rotates Now that you know the causes of the Android screen not rotating, let us check out the solutions. 1. Turn Auto-Rotate On This is one of the most commonly-made errors by users. Before you do anything else, double-check that you have enabled the auto-rotate option. You can find it under "Settings -> Display." 2. Restart Your Phone Another easy method to fix the Android screen rotation not working is to restart your phone. Restarting your phone resets all the files and starts them from scratch, making everything run properly. 3. Check Third-Party Apps There could be some third-party apps preventing the auto-rotation feature from working properly on your phone. It is recommended that you restart your phone in "Safe Mode," allowing you to find out whether a third-party app is causing your phone to misbehave. To start your phone in Safe Mode, press and hold the power button, then tap and hold the "Power Off" option until a message pops up to reboot your device into Safe Mode. Once in Safe Mode, check whether the screen rotation is working on your phone. If it is working fine, then a recently installed app could be the culprit, and you need to uninstall it. 4. Calibrate Sensors on Your Android Phone If none of the above-mentioned methods worked for you, then the sensors on your Android phone could be faulty or miscalibrated. You can recalibrate the sensors on your phone by using an app called Physics Toolbox Sensor. Available for free in the Play Store, it allows you to test the sensors on your phone and calibrate them to fix the Android screen rotation not working issue. 5. Update Your Android Device There could be a bug in the firmware version that your Android device is running on, causing the screen rotation issue. Phone manufacturers constantly push new software updates, that along with some new features also include bug fixes for such issues. It is highly recommended that you install the latest firmware on your Android device first, keep it up to date, and second, install the latest bug fixes on your phone. 6. Don't Touch the Screen When you are rotating the screen, you must make sure that your fingers are not touching the screen of the device. Sometimes, while holding your phone, you may be brushing the edges of the phone with your fingers. This will prevent the screen rotation from working properly. 7. Restart the App If you are facing a screen rotation problem on a specific app, then you can try to force-stop the app and restart it. Do this by simply long-pressing the app icon, then selecting the "App Info" option. Under the "App Info" menu, you will see the option to "Force Stop" the application. 8. Download the Rotation Control App Interestingly, there is an app called Rotation Control that has helped several users fix this Android screen rotation not working issue. This app prevents other apps from changing the orientation of the screen. Once installed, a new menu bar will show up when you drop the notification shade. From here you can select the rotation feature and see if this works. Conclusion The above methods should fix your Android screen rotation not working issue. If none of the above work, perhaps it is time for you to visit the repair shop. Read on to check out our other guides on fixing the Android delayed notifications and mobile data not working on Android issues. Is this article useful?
